

CHEMCHECK® CHEMICAL DETECTION SYSTEM

ChemCheck System Monitors Chemical Levels for You

EASILY INSTALLED, ALWAYS RELIABLE

Norweco's ChemCheck chemical detection system is easily installed in the ClearCheck tube of a Singulair Bio-Kinetic system, Bio-Kinetic wastewater management system or Bio-Dynamic tablet feeder. Once installed, homeowners and service providers no longer need to be concerned about monitoring chemical tablet levels. When a tablet feed tube is nearing empty or reaching a level preset by the service provider, the ChemCheck unit will initiate an alarm to alert the homeowner of the need for maintenance. The system is compatible with Norweco's Service Pro control center, Integrated Systems Control Center or any alarm system that will function with a normally closed 12V sensor. Norweco's ChemCheck system offers convenience for homeowners and assurance for health officials that the chemical dosing system is operating as designed.

DURABLE AND DEPENDABLE

The ChemCheck unit is a very straight forward design manufactured from materials which will not degrade in a chlorine filled environment. Installing the unit is as easy as securing two wires to a control panel. When working with multiple tubes, wiring the system in series is recommended.

INCREASE CHEMICAL SALES

Repeat chemical sales of Norweco's chemical products is a sure way to increase your company's profits. Keeping feed tubes well stocked with tablets is good for the environment and your company.
